

MySling®

with PolyWeave® advanced fabric

Patient Specific Slings

- A specific sling for each patient during their stay.
- Unique **PolyWeave®** fabric is safe and strong to use - even when wet.
- Used in many NHS hospitals to reduce cross infection.
- Safe working load of up to 500kg.
- Extensive range including plus size and amputee options.
- Fully compatible with most brands of hoists.

LISCLARE™

Freedom to Care

MySling® provides a simple and cost effective way to help minimize cross infection. Utilising **PolyWeave**® advanced fabric, our slings are safe to use when wet and can even be spot cleaned. The fabric's unique and strong design means that each **MySling**® can last for the entire duration of a patient's stay, thereby simplifying management of sling stock and reducing costs.

Used by many NHS Trusts and private care businesses

Universal Application

Options include a looped attachment or keyhole clip fixing. Both options exceed all safety and quality standards and are compatible with most of the leading hoist brands. **MySling** has a safe working load of up to 500kg (78 stone)!

Strong & Bath Safe

Unlike other disposable slings, **PolyWeave** advanced fabric remains safe and strong when wet. This makes **MySling** ideal for use whilst showering, bathing or toileting. No other disposable sling is as versatile and long lasting.

70% Polyester

Full range

Our slings are available from Paediatric to Plus Size sizes. Colour coded seams provide a visual aid to help identify the sling size. Also each sling has a unique serial code making it traceable.

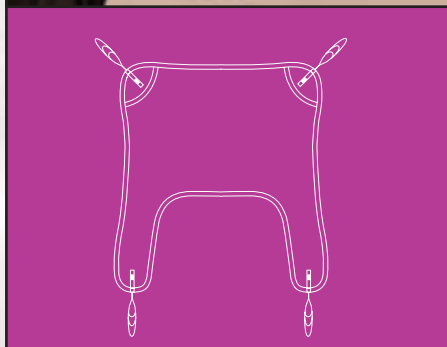

Wash indicator

PolyWeave fabric can be soaked and spot cleaned with detergents to extend the life of the sling and maintain cleanliness. However, as a disposable product, **MySling** is not designed to be machine washed. Should this happen, the wash indicator becomes visible indicating that the sling must not be used.

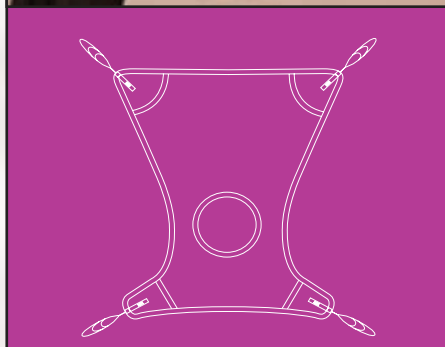

Universal

Easy to fit and yet very supportive, the universal sling is our most popular sling for general transfer purposes. Available in clipped and looped fixings

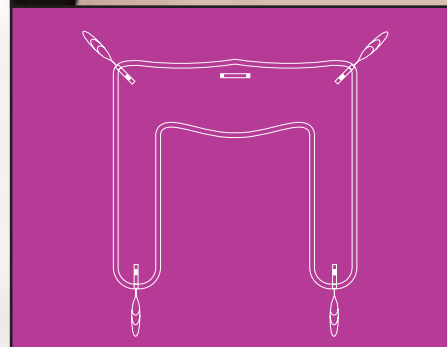

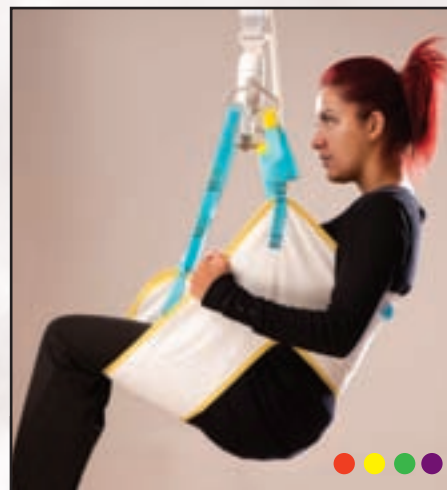

Hammock

Provides a reclining sitting posture which is suitable for most patients. Also suitable for amputees. With commode aperture and looped fixings.

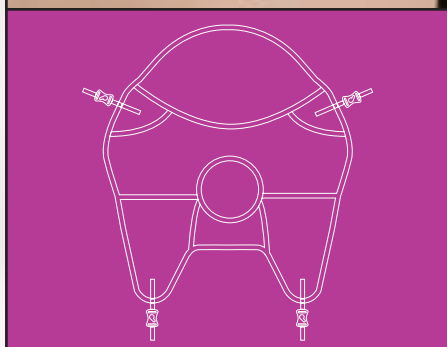

Hygiene

The large opening around the seat facilitates access for dressing and undressing. Safe to use when wet. Looped fixings.

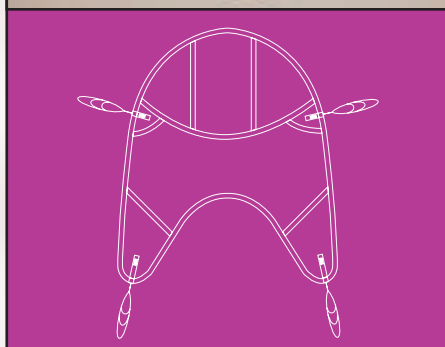

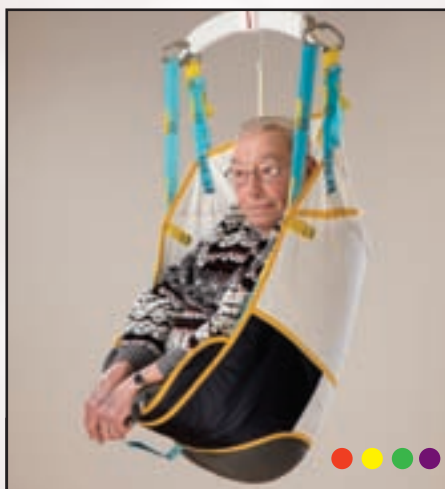

Amputee Clip

Suitable for lifts with clip attachments and for bilateral or unilateral amputee patients. With head support and commode aperture.

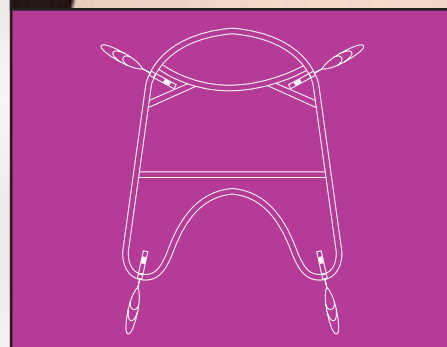

Amputee Loop

Designed for lifts which take slings with looped attachments, this sling is suitable for both bilateral or unilateral amputee patients.

High Back

Supports the entire body and is therefore suitable for most patients especially those with poor head and trunk stability. Available in clipped and looped fixings.
