

SAFE LIVING AT HOME

# Cuddle Cot

The friendly, standard compliant  
childrens bed

Nursing Care Equipment, Beds, Patient Handling, Mobility

# Functionality

## Ergonomic Use

### Safest beside mum

The Cuddle Cot complies with children's bed standard BS EN 50637:2017 and are perfect for paediatric wards. All parts are free from cracks or hazardous edges.

The simple and modern design meets the highest standards for security and infection control, with the use of transparent polycarbonate allowing for maximum external visibility.

Our goals are always the patients and carers well-being and comfort, as well as functionality and ease of use.

### Side rails

The Cuddle Cots side rails can be lowered down in a few seconds, allowing the carer to reach the patient quickly in case of an emergency situation. The side rail unlock system has been designed to prevent accidental unlock.

### Safety and full freedom

Even if the cot is connected to monitors, children can still be reached quickly if necessary. Leads can be fitted through slots in the head and foot boards, having the bed sides free of clutter. This allows the cot to be used in Operative Units such as Sub-Intensive Care Units.

The Cuddle Cot is made with the control box safely secured in a lockable compartment at the end of the bed. The 'FUNCTION CONSENT' safety system avoids involuntary or accidental activation of the bed movements as the button has to be pressed at the same time as the required function button.

Each surface of the Cuddle Cot is made of both metal and thermo-shaped plastic that is conveniently rounded and linked to one another to make cleaning easier.

The Cuddle Cot has been designed to avoid the child feeling claustrophobic whilst in the bed. The transparent sides prevent the child from feeling closed in.

### The evolution of protection

The Cuddle Cot offers Active Protection for patients with heights from **75cm to 125cm** as required by the BS EN 50637:2017 bed standard.

The high containment side rails reach a height of **804mm** preventing the child from climbing over the containment barrier, thanks to the perfectly smooth internal surfaces.

The dimensions of the base and wheels are such as to guarantee stability even in the case of an unbalanced load or of stressed caused by jumps.

## Standard Equipment

- 2-section mattress platform made of HPL
- Removable head/foot boards and side rails with dampened descent, both made of shochproof, transparent polycarbonate.
- Lockable drawer, to house the controls
- ABS base with compartments for documents/personal effects
- Compulsory control to be chosen among: hand control (RS0086), ACP (RS0082), ACP+ACK (RS0084)
- Integrated push handles and bumpers
- Safety night light
- Lock/unlock system for head/foot boards and siderails
- Electric adjustment for height, backrest, Trendelenburg and reverse-Trendelenburg motions
- Backrest quick release system
- Adhesive customisations for head and footboards
- Wheels with lock/free/directional system.

## Technical Data

Dimensions and weight	
External dimensions (L x W x H)	162. 2x 86.4 x1 57.2 cm
Mattress base	72.5 x1 32.6 cm
Mattress base division	47.6   85 cm
Safe working load	100kg
Protective height safety sides (raised)	80.4 cm
Protective height safety sides (lowered)	25.3 cm
Protective height safety sides (raised, mattress base in highest position)	40.4 cm
Adjustment options	
Tilting to Trendelenburg position	12 °
Tilting to reverse-Trendelenburg position	12 °
Mattress base height	70.7 - 110.7 cm
Backrest angle	70 °
